CLAIM AMENDMENTS

- 1. (Currently amended) A vehicle armrest hinged
- structure comprising:
- a support;
- a hinge on said support and having at least one hinge arm
- swingable about a hinge axis on said support said hinge arm having
- 6 notches at opposite ends thereof;
- an armrest connected by said hinge with said support and
- swingable about said axis through a predetermined maximum angular
- range, said armrest having a hook engageable in one of said
- notches; and
- a disengaging element on said armrest normally engaged
- with said arm in the other of said notches and enabling joint
- rotation of said hinge arm and said armrest, but disengaging said
- arm upon application of a force to said armrest exceeding a
- limiting force upon swinging of said armrest relative to said
- support, said armrest being <u>fully</u> detachable and removable from
- said hinge, and said hinge arm and separable from said axis when
- said limiting force is exceeded.

- 2. (previously presented) The hinge structure defined in claim 1 wherein said disengaging element is a member slidable longitudinally in a guide formed in said armrest and engaging a free end of said arm, said armrest disengaging from said arm with a rotational movement.
- 3. (previously presented) The hinge structure defined in claim 2, further comprising a stop in said armrest limiting the displacement of said disengaging element.
- 4. (Original) The hinge structure defined in claim 3,

 further comprising a compression spring bearing on said disengaging

 element.
- 5. (Original) The hinge structure defined in claim 4
 wherein said disengaging element is composed of an elastic
 material.

1 (Original) The hinge structure defined in claim 5 2

wherein said elastic material is an elastic synthetic resin.

- 1 (previously presented) The hinge structure defined in 2 claim 5, further comprising a bevel on one of said elements and 3 said arm for camming said arm out of engagement with said element 4 upon displacement of said armrest with said force exceeding 5 limiting force.
- 1 (Original) The hinge structure defined in claim 7 2 wherein said disengaging element engages in a notch in a free end 3 of said arm.
- 1 (previously presented) The hinge structure defined in 2 claim 8 wherein said armrest has a base provided with an opening in 3 which said arm is received, said arm being positioned between upper and lower walls of said base.

- 1 10. (previously presented) The hinge structure defined
- 2 in claim 9 wherein said arm is provided with a notch opposite a
- 3 free end of said arm and said armrest is hook has a projection
- 4 engaging in said notch.
- 1 11. (Original) The hinge structure defined in claim 10
- 2 wherein said projection is rounded.
